PERSONAL STATEMENT

I am fascinated by how computer technology has brought changes to our lives that could never have been predicted; witnessing the expansion of computer science allowed me to consider studying software engineering from an early age, and my enthusiasm has perpetually developed since this time. I'm a strong, hardworking and motivated software developer with experience in software development and engineering. Well-versed in numerous technologies including JavaScript, solidity, Vue.js, SQL, Node.js, git, PHP, Laravel and JSON. Understanding client requirements and communicating the progress of projects are core values in achieving memorable relationships and long-lasting business.

CORE SKILLS

- Broad development knowledge, including Web Frontend and Backend
- Knowledge in relational and non-relational databases
- Industry aware and technically up to speed with current software development tools.
- Strong innovative problem solver.
- Strong in object-oriented programming languages like PHP.
- Strong in website and web application development using latest technologies including HTML5, CSS3, JavaScript frameworks, and scripting languages like PHP.
- Strong in communication skills and team work.
- Skilled in working with web development frameworks like VueJs
- Knowledge in systems integration using APIs
